(54) Title: DECODER FOR, AND METHOD OF, PROCESSING A TRANSPORT PACKET STREAM

## (57) Abstract

A decoder (12) is described for processing a transport packet stream. The packet stream comprises packetised data encapsulated within the packet payloads. The decoder comprises: means (81) for receiving an identifier of a particular security module system from a portable security module; means (81) for configuring the decoder in response to the received identifier; means (80) for receiving filter data for filtering packetised data associated with said particular security module system from the portable security module; and means (80) for filtering said packetised data in response to said received filter data.
